

PEPTISYNTHA

a member of the Solvay group

*The right solution
for bulk peptides*

Company information

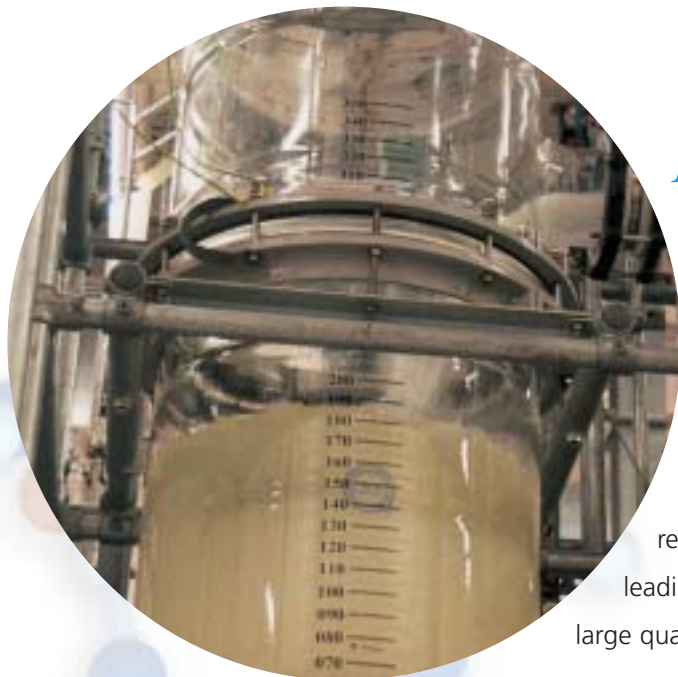

The activities of Peptisyntha focus on the production of large volumes of therapeutic peptides (peptide APIs) and are supported by decades of experience in solution phase and solid phase technologies. This recognized expertise in peptide synthesis is complemented by a comprehensive know-how in purification techniques, especially preparative HPLC. Peptisyntha has established its reputation through the development of custom-made peptides in close and long lasting relationships with its customers.

Scale-up capabilities

Peptisyntha's technologies and know-how can be used to scale up the production of peptides from a lab scale process development study up to the production of hundreds of kilograms in strict compliance with the current GMP regulations. With both liquid phase and solid phase technologies, together with purification and lyophilization capacities at all scales, Peptisyntha is an efficient, dependable and flexible partner whenever it comes to outsourcing the manufacture of therapeutic peptides at all stages from preclinical to commercial scale requirements.

Proprietary technology

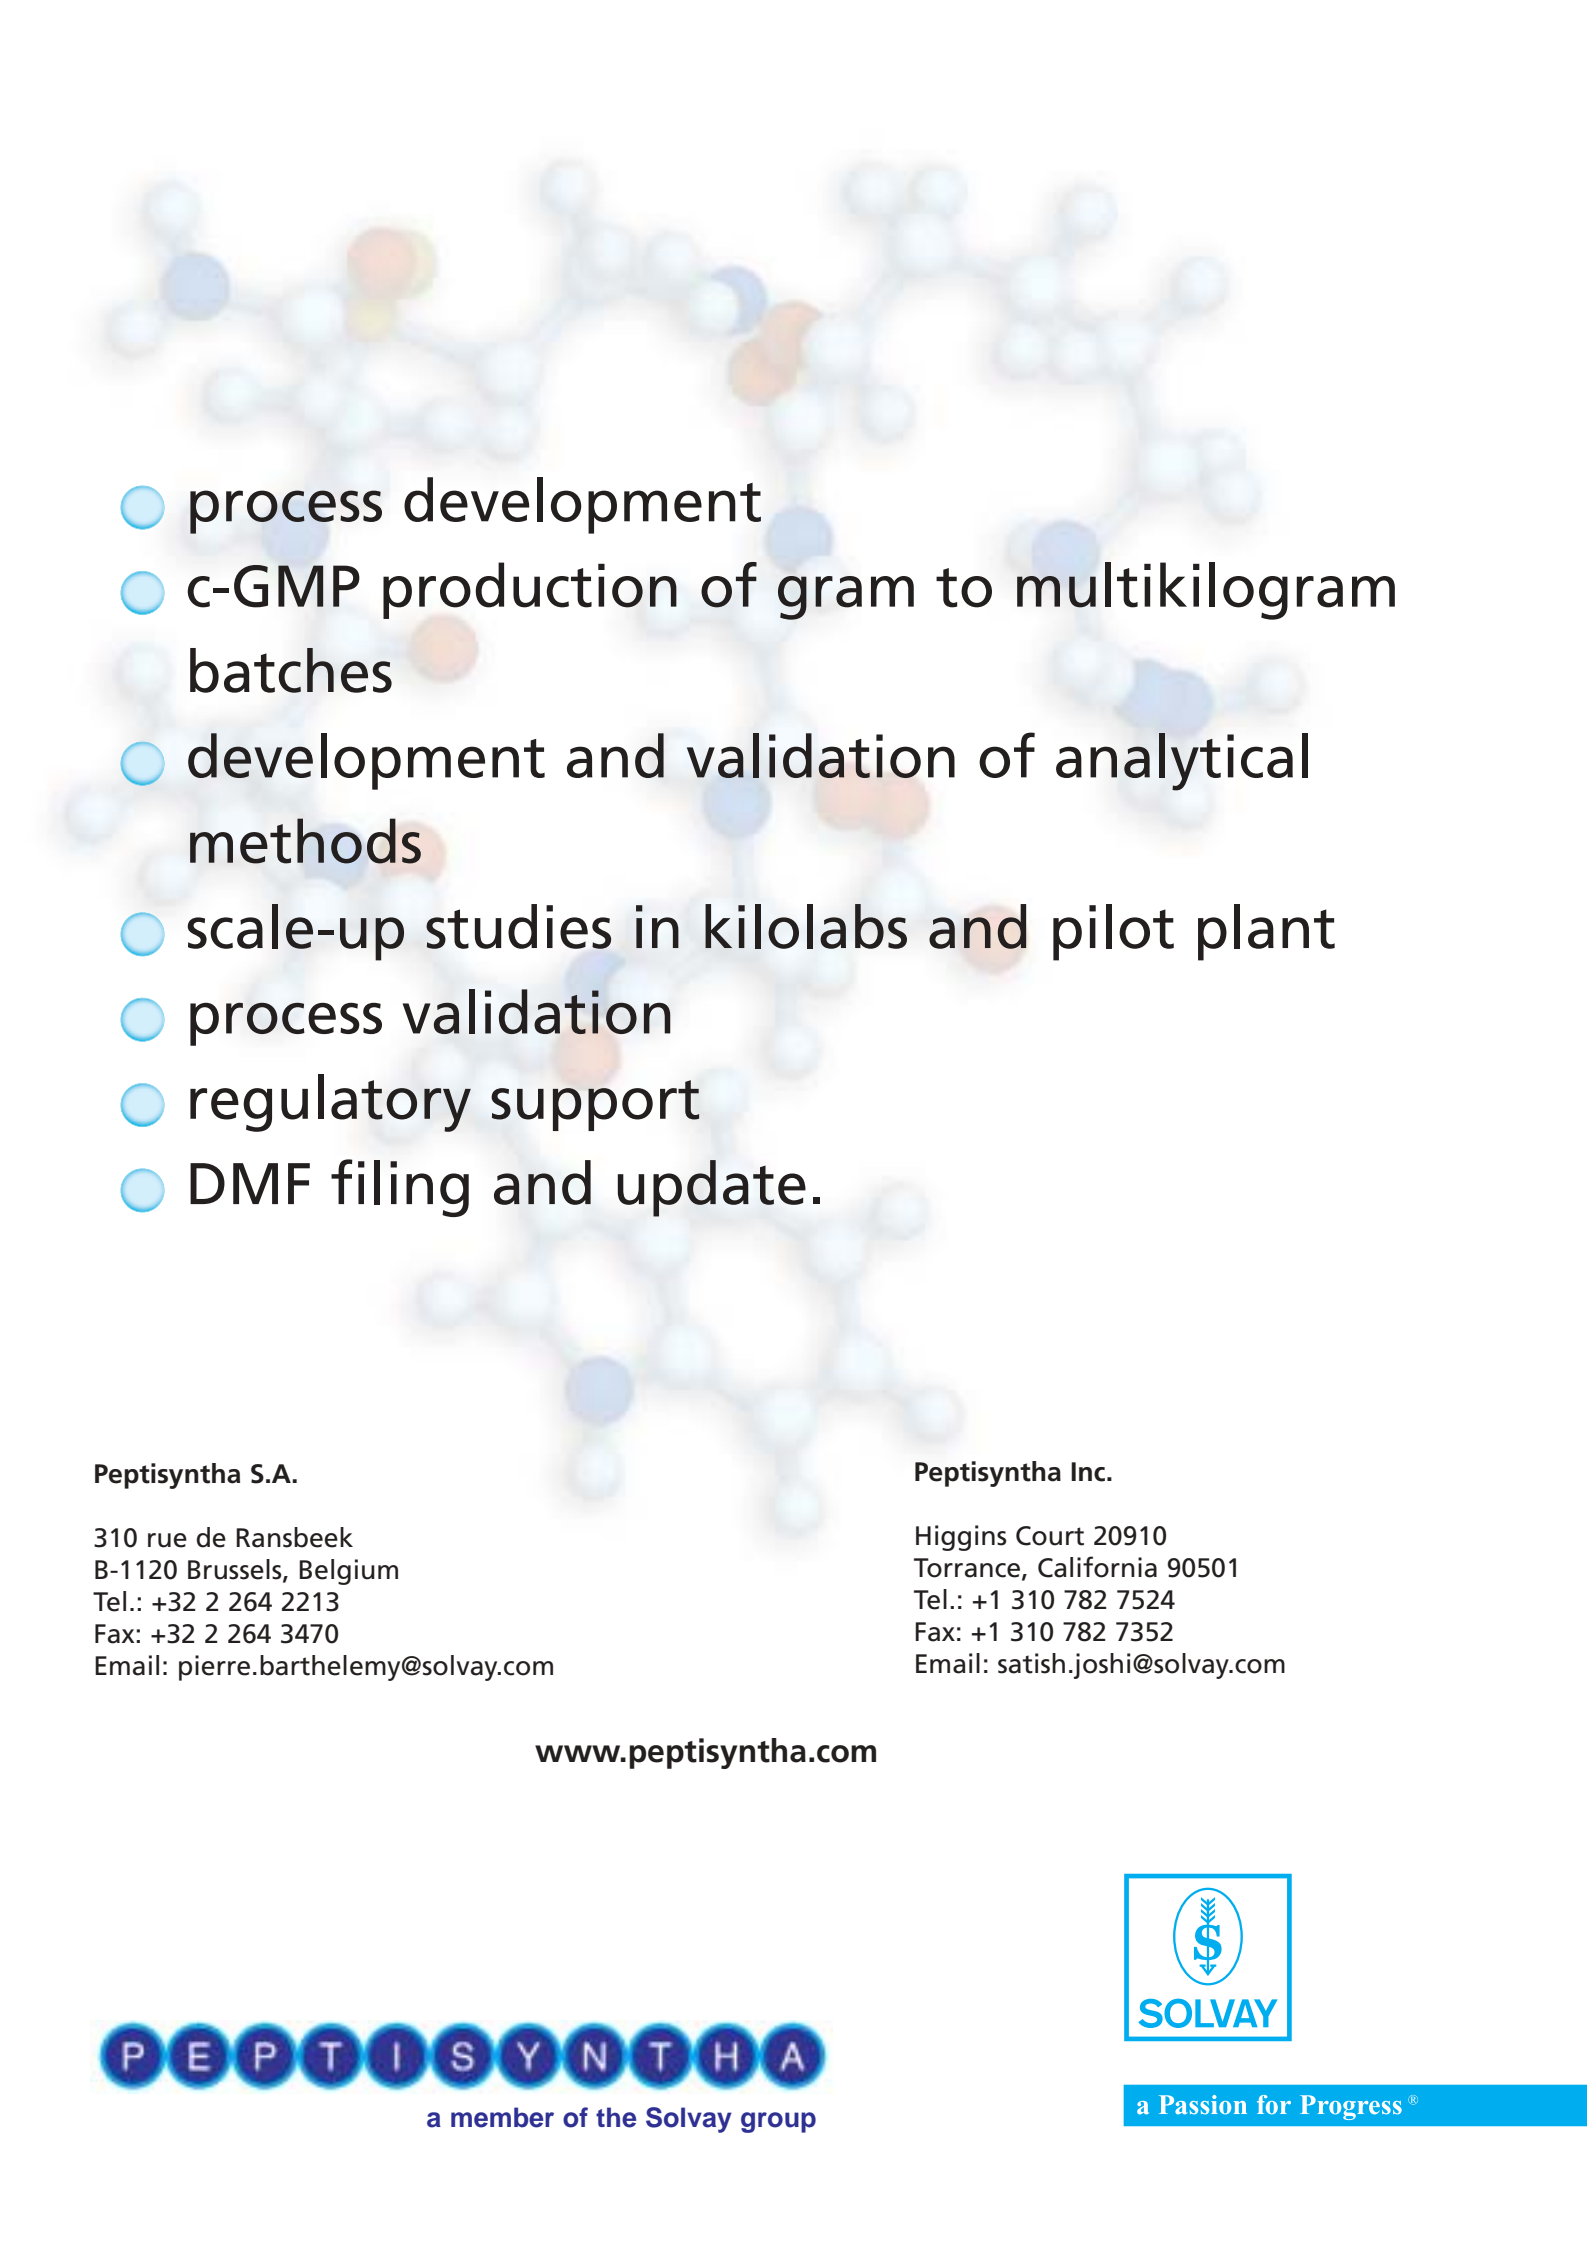

As far as liquid phase synthesis is concerned, Peptisyntha applies a specific, proprietary technology, which consists in the use of persilylated amino acids and intermediates, allowing a significant reduction of the number of steps and leading to the cost effective production of large quantities of bulk peptides.

Quality and Regulatory

All activities at Peptisyntha take place in state-of-the-art facilities and are backed up by the early involvement of the QA department to guarantee cGMP production, testing and documentation standards in accordance with the most stringent FDA and EMEA requirements. Peptisyntha has a comprehensive experience with all aspects of validation programs. Regulatory support is granted through the different steps of any project, including DMF filing and updates.

Peptisyntha is a wholly owned subsidiary of Solvay, an international chemical and pharmaceutical company. Peptisyntha operates in two locations with Peptisyntha SA in Brussels, Belgium and Peptisyntha Inc. in Torrance, California.

- 
- process development
 - c-GMP production of gram to multikilogram batches
 - development and validation of analytical methods
 - scale-up studies in kilolabs and pilot plant
 - process validation
 - regulatory support
 - DMF filing and update.
